(*Year 2009 figures have not been audited)

About CyberTAN (<http://www.cybertantech.com/>)

CyberTAN Technology, Inc. is a leading global OEM/ODM supplier of broadband and wireless networking equipment. The company has particularly strong R&D capabilities in wireless and router technologies. CyberTAN's products are designed to be user-friendly and simple to operate, making it easy for all users to get connected. CyberTAN's efforts over the years have won it substantial shares of the broadband and wireless networking markets.

Looking toward the future of broadband, CyberTAN makes its ultimate goal the development, through the company's own R&D, of ever more diversified networking products, and strives to bring about a new world of even more secure, more convenient networking.

Among CyberTAN's main products are broadband networking devices of all kinds conforming to the IEEE 802.11a, 11b, 11g, and draft-11n standards, including wireless broadband routers, xDSL routers, wireless VPN routers, wireless broadband security routers, audio/video entertainment gateways, digital media adapters, wireless access points, wireless bridges, wireless network adapters, and more.
